Generic Recommendations for Hosting the Application in Production:

1. The Web Application may be hosted with limited privileges (Without Administrator/Root) of Read and Script Execution permissions.
2. Operating System, Web Server and Database Server hardening needs to be in place for the production server along with encrypted transport layer (SSL) protection.
3. Use the latest version of software technology in the production environment with OEM recommended patches.

Note - The security certificate is valid for one year from the date of issuance, given that no dynamic changes are made to the application source code. If any alterations, such as modifications to the application code or system configuration, occur, the organization is required to conduct a subsequent VAPT/Security Testing specifically for the modified portion of the application.
