Recommendations:

During Production Hosting

- Security Harden the OS/Web Server/DB Server
- Update OS, Web & DB Server, and Application Frameworks
- Maintain an updated Software Bill of Materials (SBOM) during production and use tools to automate its generation and management.

After Hosting

- Regularly Update OS, Web & DB Server, and Application Frameworks
- Update and validate SBOM to reflect changes in production software, track third-party components, and perform regular vulnerability scans.
